Asking and Operators

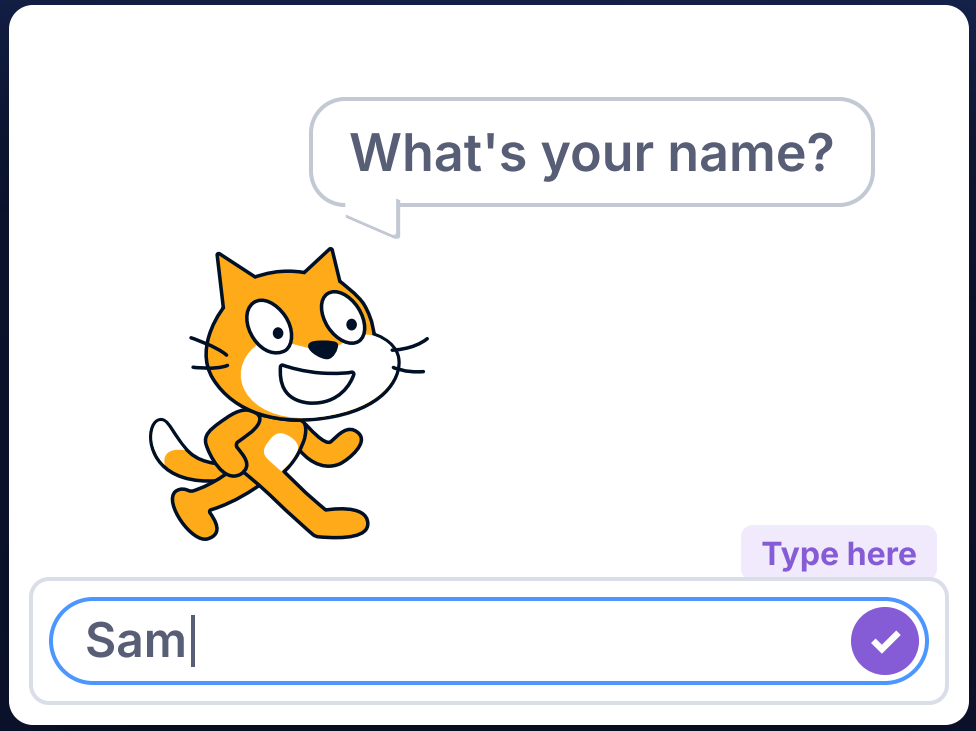

- **ask** a question, and wait for the answer.
- **answer** is what the player typed.
- **Operators** are the green blocks. They do math and check answers.

ask and wait

1. The cat asks the question.
2. A box opens under the stage.
3. The script **waits** until you type and press **Enter**.

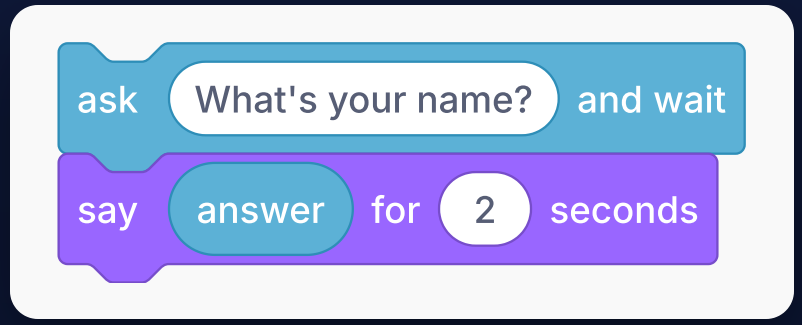

Find it in **Sensing**, the light blue section. Click the white box in the block to change the question.

answer is what you typed

After you press Enter, **answer** holds what you typed. Drop it into any round hole, like the one in **say**.

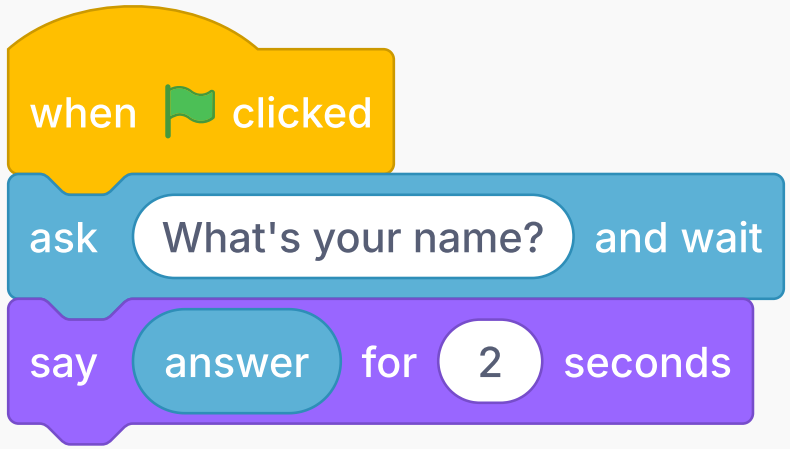

You typed Sam, so the cat says Sam.

> Every new **ask** replaces the old answer.

TRY IT · 2 MINUTES

Make the cat say your name

1. Build it on the cat.
2. Click the green flag.
3. Type your name and press **Enter**.

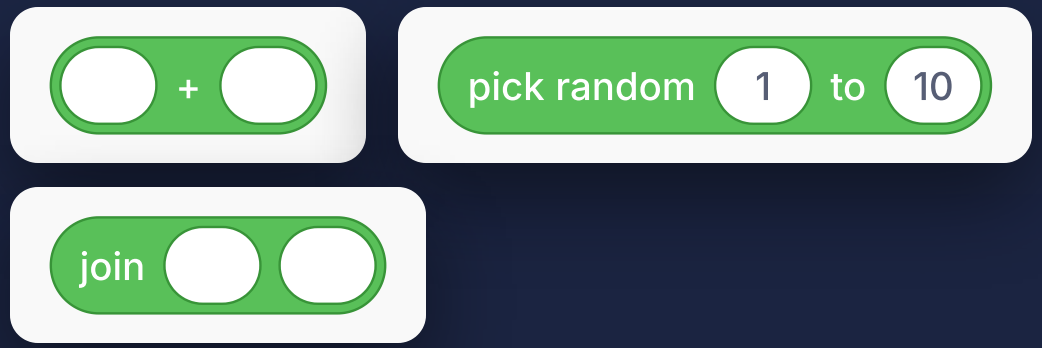

It works if the cat says your name.

answer is in Sensing (light blue). **say for 2 seconds** is in Looks (purple).

Operators do math and check things

ROUND BLOCKS

Give you a number or a word

They fit in **round holes**, like the one in **say**.

POINTY BLOCKS

Give you true or false

They fit in **pointy holes**, like in **if < > then**.

Click any green block in Scratch, and a little bubble shows what it gives you.

Math blocks

+ adds

– takes away

*** means times**

/ means divide

Type numbers into the white holes, or drop in a variable like **Score**.

pick random and join

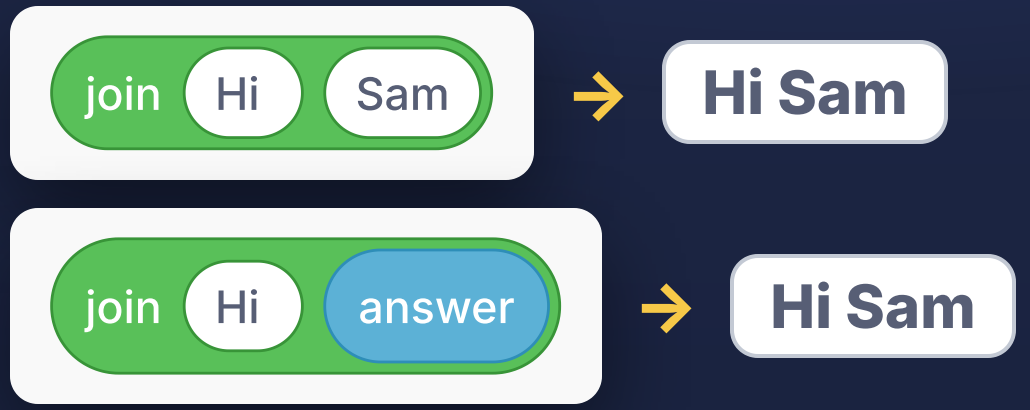

pick random

Click it again: **2** then **9**

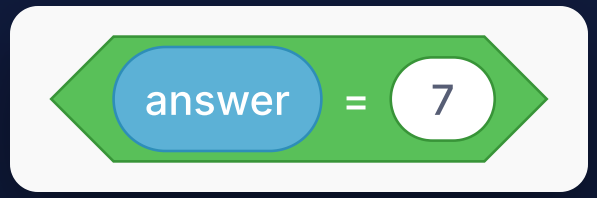

A new number every time. Math Cat uses it to make a new question each turn.

join

Glues two things into one. Type a **space** after Hi, or you get HiSam.

Checking blocks: true or false

true if you typed 7

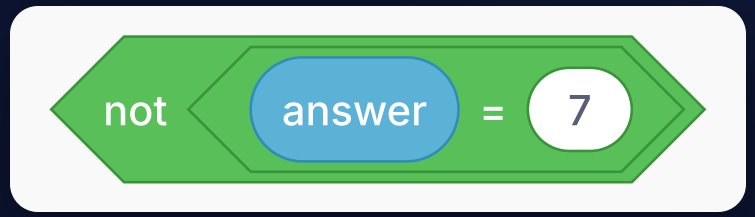

false if you typed anything else

true 5 is more than 3

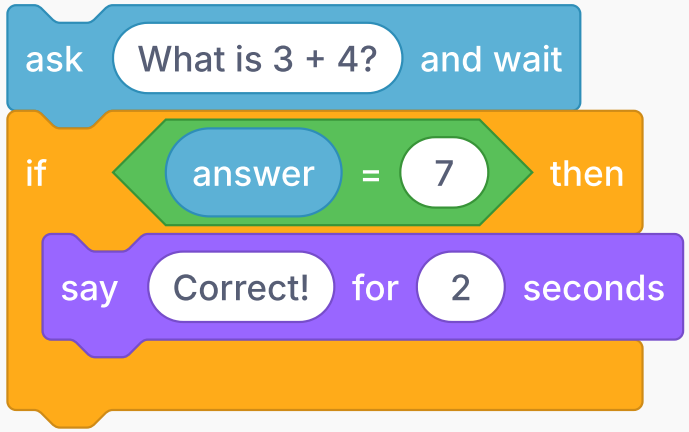

false 2 is not more than 3

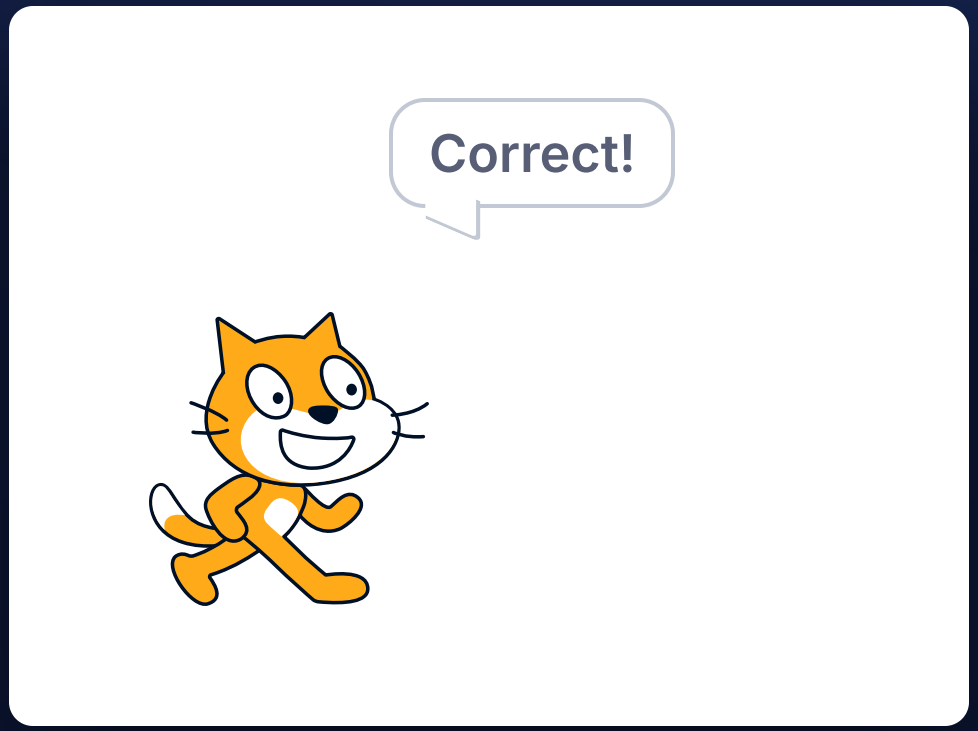

true if the answer is **not** 7. **not** flips true and false.

Ask, then check

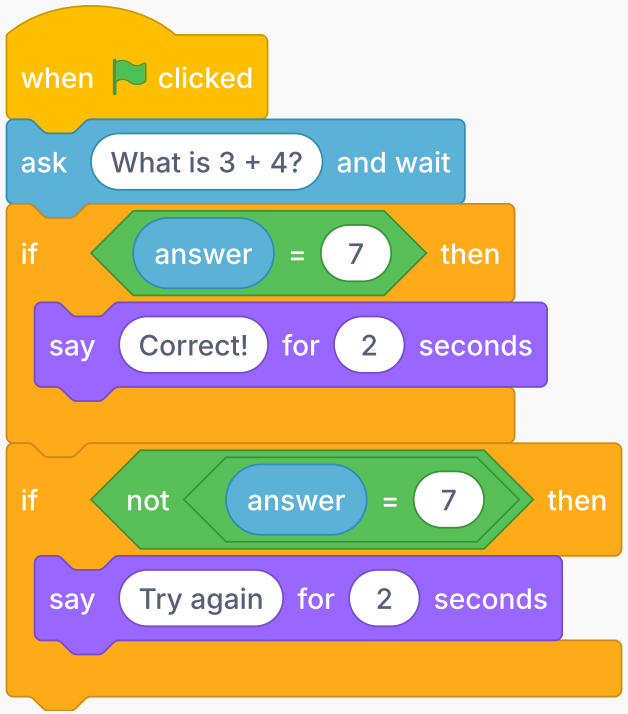

1. **ask** shows the question and waits.
2. You type 7. Now **answer** is 7.
3. **=** checks: is answer the same as 7? **True.**
4. It's true, so the cat says **Correct!**

The = block goes in the pointy hole of the if.

TRY IT · 3 MINUTES

A one-question quiz

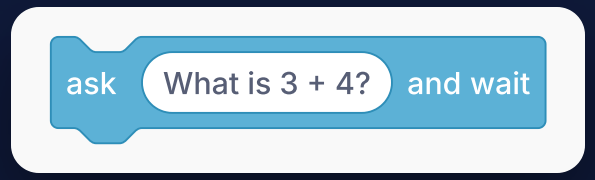

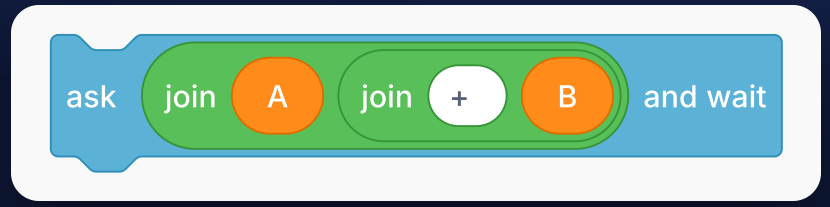

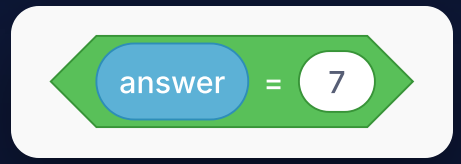

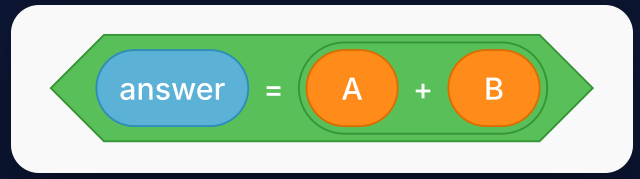

1. Build it on the cat.
2. Click the green flag and type **7**.
3. Click it again and type **5**.

It works if 7 says Correct! and 5 says Try again.

if then is in Control (orange). **=** and **not** are in Operators (green).

Math Cat is the same quiz, with new numbers every time

	YOUR QUIZ	MATH CAT
The question		
The check		

pick random gives A and B. **join** builds the question. **+** works out the right answer. Now open the Math Cat slides and start Mission 1.
